

7.1. Institutional Values and Social Responsibilities

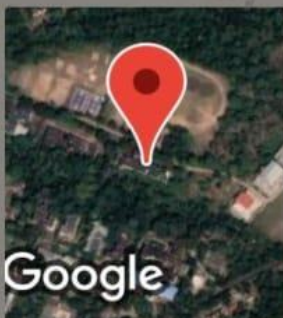

Solar Energy

RDVV takes effective steps on harnessing solar energy. Solar panels have been installed for powering the academic/administrative buildings. The details and images are provided below.

Biogas Plant

The biogas produced from food waste, decomposable organic material and kitchen wastes consisting of methane and little amount of CO₂ is an alternative fuel for cooking gas which is utilized in the University effectively.

Wheeling to the Grid

The University is transferring the solar system generated electrical power to the Grid via distribution system of MPEB and helping the MPEB to cater the power demands of the area during the peak demand time.

Sensor-based energy conservation

RDVV keenly focuses on effective use of energy conservation within the campus. The Institute has implemented day/night sensor-based street 100W lights within the campus.

Use of LED Bulbs/Power Efficient Equipment

RDVV is using CFL, LED and star rated power equipment's which consume lesser electricity for illumination and result in lesser energy utilization. The University procures electrical equipment's which have energy star rating as per Bureau of Energy Efficiency (BEE) standard which ensure relatively lesser consumption of electricity. The University has installed the LED lights in the campus for low consumption of energy and replaces the old light systems.
