Certificate for Energy Audit

The Energy Audit gives a positive orientation to the energy cost reduction and will help to keep focus on variations which occur in the energy costs, availability and reliability of supply of energy. Energy auditing deals with the conservation methods to reduce its consumption related to environmental degradation.

The main focus of Rani Durgawati University, Jabalpur is to reduce energy consumption per unit of product output. The eco-friendly campus focuses on the efficient use of energy conservation and its savings opportunities in a sustainable way.

In the whole campus of Rani Durgawati University, Jabalpur, the old incandescent bulb which uses approximately 50W to 100W are gradually being replaced by efficient LED which uses less than 10W, which shows the positive indication on energy savings. Five-star air conditioners are also being installed to reduce the energy consumption. Broad windows have been constructed in many departments for maximum lighting and ventilation, which is further useful in maintaining the eco-friendly campus. Alternative sources of energy like solar panels and Biogas are installed in the University for maximum energy conservation and utilisation. Sensor based lights too are installed in some departments to save energy.
